PROFILE SUMMARY

Data analyst fresher (BCA, 2026) who cleans messy data, queries it with SQL, and turns it into dashboards people can actually use. Strong in Excel, Power BI and Python, with projects on property, HR and retail data. Open to Data Analyst, MIS Executive and Business Analyst roles.

WORK EXPERIENCE

Athena Digital Solutions Jan 2025 – Oct 2025

Apprentice — Front End Developer

- Co-built a full e-commerce website in a two-person startup team, from design to deployment.
- Improved product browsing speed by 30% through optimized component architecture and seamless navigation flows.

EDUCATION

Mewar Institute of Management, Vasundhara, Ghaziabad Graduation: Jun 2026

Bachelors in Computer Applications

Data Science & AI Course | Ducat | In progress Aug 2026 - Jan 2027

PROJECT EXPERIENCE

MagicBricks Property Analysis | Python, Pandas, DuckDB, SQL, Streamlit, Plotly | **GitHub**

- Cleaned 1,820 messy property listings: removed duplicates, converted text prices like "₹120.58 Lakh" to numbers, fixed impossible areas and BHK values.
- Loaded the clean data into DuckDB and wrote SQL queries to answer pricing questions across 10 cities.
- Found city is the biggest price driver: median price per sqft is about 4x higher in Mumbai (~16,200) than Lucknow (~4,100).
- Built an interactive Streamlit dashboard with filters and KPI cards, and documented data limitations in the README.

HR Attrition Dashboard | Power BI | **GitHub**

- Built a 4-page Power BI dashboard on 1,470 employees (IBM HR dataset): executive overview, attrition drivers, pay and satisfaction, flight risk.
- Added KPI cards, slicers and a Flight Risk page listing the 89 active employees in the High risk band, where actual attrition was 52.4% vs 6.2% in the Low band.
- Found overtime is the strongest warning sign: 30.5% attrition with overtime vs 10.4% without (2.9x), and Sales Representatives lose 39.8% of staff.

Customer Churn Intelligence | Python, DuckDB, SQL, XGBoost, SHAP, Streamlit | **GitHub**

- Cleaned the Online Retail II dataset with SQL and built RFM metrics per customer.
- Created a churn label and trained a XGBoost model, then used SHAP to explain which features drive churn.
- Segmented customers into 3 groups using KMeans and presented results in a Streamlit dashboard.

LEADERSHIP EXPERIENCE

Google Arcade / GSSoC Oct 2024 – Jun 2025

Volunteer / Open-Source Contributor

- Achieved Google Arcade Champion status — completed hands-on labs in Terraform, BigQuery, ML, and Gen AI.
- Contributed to Bubble.ai open-source project via GSSoC, collaborating with distributed teams on real codebases.

SKILLS

Data Analysis: Python (Pandas, NumPy), SQL (DuckDB, MySQL), data cleaning, EDA, RFM analysis.

Visualization & BI: Power BI, Streamlit, Plotly, Excel dashboards,Tableau.

Excel & MS Office: Advanced Excel (Pivot Tables, VLOOKUP, formulas, data cleaning), Word, PowerPoint.

ML Basics: scikit-learn, XGBoost, SHAP, Kmeans,

Tools: Git, GitHub, Jupyter, VS Code, Linux.
